Impact Risk	Risk Statement	Response strategy	Objective	Likelihood	Impact	Risk Level
GitHub	Any source code pushed to GitHub could potentially contain information that hackers would find useful when trying to a maliciously alter the project. The source files could potentially contain hard-coded login credentials which could allow for data leaks.	Use stronger passwords and usernames than just "admin" or "root", and keep them regularly updated.	Reduce the likelihood of hacking and data leaks.	Medium	High	Medium-to-High
Computer failure	Damage or hard drive failure could lead to loss of source code	Perform regular uploads to GitHub so that the code and the work is preserved in any case.	Reduce the risk of losing all work	Low	High	Low-to-High
Health Issues	Health issues might affect in the timely delivery of the project	Good time management is better so that there is always time for some unforeseen circumstances	Could delay in completing the project	Low	Medium	Low -to – medium
Maven	Being unable to package the project into .jar file due to little practice	Do not leave until the last minute to do it so that there is always time to fix things	Not meeting the criterias	Medium	Medium	Low-medium
